❖ **Syllabus as per Choice Based Credit System**

<b>1.</b> Name of the Programme	<b>T. Y. B. Sc. Mathematics : CBCS</b>	
<b>The T. Y. B. Sc. in Mathematics course is a one Year Full Time Course consisting of two semesters, to be known as Semester V and Semester VI. Each semester consists of four core courses and one Applied component course.</b>		
<b>2.</b> Course Code	SEMESTER-V CODES	SEMESTER-VI CODES
	SMAT501	SMAT601
	SMAT502	SMAT602
	SMAT503	SMAT603
	SMAT504A/B	SMAT604A/B
	SMATAC501	SMATAC601
<b>3.</b> Course Title	Mathematics	
	Computer Programming and System Analysis- AC (Applied components)	
<b>4.</b> Semester wise Course Contents	Copy of the detailed syllabus Enclosed	
<b>5.</b> References and additional references	Enclosed in the Syllabus	
<b>6.</b> No. of Credits per Semester	16 + 4 (for AC) = 20	
<b>7.</b> No. of lectures per Unit	15	
<b>8.</b> No. of lectures per week	03 of each courses and 04 for AC	
<b>9.</b> No. of Practicals per week	01 of each courses and 02 for AC	
<b>10.</b> Scheme of Examination	Semester End Exam: <b>60 marks</b> (3 Questions of 20 marks each)	
	Internal Assessment: <b>40 marks</b>	
	Class Test : 15 marks	
	Project/ Assignment : 15 marks	
	Class Participation : 10 marks	
<b>11.</b> Special notes, if any	No	
<b>12.</b> Eligibility, if any	As laid down in the College Admission brochure / website	
<b>13.</b> Fee Structure	As per College Fee Structure specifications	
<b>14.</b> Special Ordinances / Resolutions, if any	No	

**Programme Structure and Course Credit Scheme :**

<b>Programme: T. Y. B. Sc.</b>	<b>Semester: V</b>	<b>Credits</b>	<b>Semester: VI</b>	<b>Credits</b>
Course 1: Maths Paper-I	<b>Course Code</b> SMAT501	2.5	<b>Course Code</b> SMAT601	2.5
Course 2: Maths Paper-II	<b>Course Code</b> SMAT502	2.5	<b>Course Code</b> SMAT602	2.5

Course 4: Maths Paper-IV	<b>Course Code</b> SMAT504A/B	2.5	<b>Course Code</b> SMAT604A/B	2.5
Course 5: Practicals based on Maths paper I & II	<b>Course Code</b> SMATP501	3.0	<b>Course Code</b> SMATP601	3.0
Course 6: Practicals based on Maths paper III & IV	<b>Course Code</b> SMATP502	3.0	<b>Course Code</b> SMATP602	3.0
Course 7: Applied component Computer Programming and System Analysis (CPSA)	<b>Course Code</b> SMATAC501	2.0	<b>Course Code</b> SMATAC601	2.0
Course 8: Applied component Practicals (CPSA)	<b>Course Code</b> SMATACP501	2.0	<b>Course Code</b> SMATACP601	2.0

❖ Semester-wise Details of Mathematics Course

**SEMESTER-V**

<b>Paper 1: Multivariable Calculus II</b>				
<b>Course Code</b>	<b>Unit</b>	<b>Topics</b>	<b>Credits</b>	<b>L/week</b>
SMAT501	I	Multiple Integrals	2.5	3
	II	Line Integrals		
	III	Surface Integrals		
<b>Paper 2: Algebra-V</b>				
SMAT502	I	Groups and Subgroups	2.5	3
	II	Cyclic Groups and Cyclic subgroups		
	III	Lagrange's Theorem and Group Homomorphism		
<b>Paper 3: Topology of Metric Spaces</b>				
SMAT503	I	Metric spaces	2.5	3
	II	Sequences and Complete metric spaces		
	III	Compact sets		
<b>Paper 4 : Numerical Analysis-I (Elective A)</b>				
SMAT504A	I	Error Analysis	2.5	3
	II	Transcendental and Polynomial equations		
	III	Linear Systems of Equations		
<b>Paper 4 : Number Theory and Its Applications-I (Elective B)</b>				
SMAT504B	I	Congruences and Factorization	2.5	3
	II	Diophantine equations and their solutions		
	III	Primitive Roots and Cryptography		
<b>PRACTICALS</b>				
SMATP501	--	Practicals based on SMAT501 and SMAT502	3	6
SMATP502	--	Practicals based on SMAT503 and SMAT504A/B	3	6
<b>Applied Component : Computer Programming and System Analysis</b>				
SMATAC501	I	Relational Database Management System	2	4
	II	Introduction to Java Programming		
	III	Object Oriented Programming with Java		
	IV	Data Structure Applications with Java		
<b>PRACTICALS</b>				
SMATPAC501	--	Practical based on SMATAC501	2	4

## SEMESTER-VI

<b>Paper 1: Basic Complex Analysis</b>				
Course Code	Un it	Topics	Cred its	L/week
SMAT601	I	Introduction to Complex Analysis	2.5	3
	II	Cauchy Integral Formula		
	III	Complex Power Series, Laurent series and isolated singularities		
<b>Paper 2: Algebra-VI</b>				
SMAT602	I	Group Theory	2.5	3
	II	Ring Theory		
	III	Polynomial Rings and Field theory		
<b>Paper 3: Topology of Metric Spaces and Real Analysis</b>				
SMAT603	I	Continuous functions on metric spaces	2.5	3
	II	Connected sets		
	III	Sequences and series of functions		
<b>Paper 4 : Numerical Analysis-II (Elective A)</b>				
SMAT604A	I	Interpolations	2.5	3
	II	Polynomial Approximations and Numerical Differentiation		
	III	Numerical Integration		
<b>Paper 4 : Number Theory and its Applications-II (Elective B)</b>				
SMAT604B	I	Quadratic Reciprocity	2.5	3
	II	Continued Fractions		
	III	Pell's equation, Arithmetic function and Special numbers		
<b>PRACTICALS</b>				
SMATP601	--	Practicals based on SMAT601 and SMAT602	3	6
SMATP602	--	Practicals based on SMAT603 and SMAT604(A/B)	3	6
<b>Applied Component: Computer Programming and System Analysis</b>				
SMATAC601	I	Introduction to Python	2	4
	II	Advanced topics in Python		
	III	Introduction to Sage Math		
	IV	Programming in Sage Math		
<b>PRACTICALS</b>				
SMATPAC601		Practical based on SMATAC601	2	4

**T. Y. B. Sc. MATHEMATICS : Choice Based Credit System**

**Semester - V**

**PAPER – I : MULTIVARIABLE CALCULUS II**

<b>Course Name: Multivariable Calculus II</b> (45 lectures)		<b>Course Code: SMAT501</b>	
<b>Periods per week (1 period 48 minutes)</b>		<b>03</b>	
<b>Credits</b>		<b>2.5</b>	
<b>Evaluation System</b>		<b>Hours</b>	<b>Marks</b>
	<b>Theory Examination</b>	<b>2.0</b>	<b>60</b>
	<b>Theory Internal</b>		<b>40</b>

**Course Objectives:**

- ❖ To Visualize and draw graphs of surfaces in space and find area & Volume under them.
- ❖ Understanding parameterization and To Solve line and surface integrals.
- ❖ Discuss Scalar and vector field and conservation of vector field.
- ❖ To understand the notion of Stokes and Gauss divergence theorem.

<b>Unit No.</b>	<b>Content</b>	<b>No. of lectures</b>
<b>Unit I</b>	<p><b>Multiple Integrals (15 Lectures)</b>                      Definition of double (resp: triple) integral of a function and bounded on a rectangle (resp: box). Geometric interpretation as area and volume. Fubini's Theorem over rectangles and any closed bounded sets, Iterated Integrals. Basic properties of double and triple integrals proved using the Fubini's theorem such as</p> <p>(i) Integrability of the sums, scalar multiples, products, and (under suitable conditions) quotients of integrable functions. Formulae for the integrals of sums and scalar multiples of integrable functions.</p> <p>(ii) Integrability of continuous functions. More generally, Integrability of functions with a small set of (Here, the notion of “small sets should include finite unions of graphs of continuous functions.)</p> <p>(iii) Domain additivity of the integral. Integrability and the integral over arbitrary bounded domains. Change of variables formula (Statement only). Polar, cylindrical and spherical coordinates, and integration using these coordinates. Differentiation under the integral sign. Applications to finding the center of gravity and moments of inertia.</p>	<b>15</b>

<p><b>Unit II</b></p>	<p><b>Line Integrals</b>  Review of Scalar and Vector fields on <math>R^n</math>, Vector Differential Operators, Gradient, Curl, Divergence.  Paths (parameterized curves) in <math>R^n</math>, (emphasis on <math>R^2</math>, and <math>R^3</math>). Smooth and piecewise smooth paths. Closed paths. Equivalence and orientation preserving equivalence of paths. Definition of the line integral of a vector field over a piecewise smooth path. Basic properties of line integrals including linearity, path-additivity and behaviour under a change of parameters. Examples.  Line integrals of the gradient vector field, Fundamental Theorem of Calculus for Line Integrals, Necessary and sufficient conditions for a vector field to be conservative. Green's Theorem (proof in the case of rectangular domains). Applications to evaluation of line integrals.</p>	<p><b>15</b></p>
<p><b>Unit III</b></p>	<p><b>Surface Integrals</b>  Parameterized surfaces. Smoothly equivalent parameterizations. Area of such surfaces.  Definition of surface integrals of scalar-valued functions as well as of vector fields defined on a surface.  Curl and divergence of a vector field. Elementary identities involving gradient, curl and divergence.  Stokes theorem (proof assuming the general form of Green's theorem), examples. Gauss Divergence Theorem (proof only in the case of cubical domains), examples.</p>	<p><b>15</b></p>

**List of suggested practicals based on SMAT501:**

1. Evaluation of double and triple integrals.
2. Change of variables in double and triple integrals and applications
3. Line integrals of scalar and vector fields
4. Greens theorem, conservative field and applications
5. Evaluation of surface integrals
6. Stokes and Gauss divergence theorem
7. Miscellaneous theoretical questions based on full paper

### **Learning Outcomes:**

On studying the syllabi, the learner will be able to

- ◆ Learn the double and triple integrals.
- ◆ Define line integrals of scalar and vector fields, basic properties and conservative of vector field
- ◆ Learn Fundamental Theorems of Calculus for line integrals, Green's theorem and their applications
- ◆ Understand the concept of surface integrals for scalar and vector fields and some identities involving gradient, curl and divergence

<b>T. Y. B. Sc. MATHEMATICS : Choice Based Credit System</b>				
<b>Semester - V</b>				
<b>PAPER – II : ALGEBRA-V</b>				
<b>Course Name: ALGEBRA-V (45 lectures)</b>		<b>Course Code: SMAT502</b>		
<b>Periods per week (1 period 48 minutes)</b>		<b>03</b>		
<b>Credits</b>		<b>2.5</b>		
<b>Evaluation System</b>			<b>Hours</b>	<b>Marks</b>
	<b>Theory Examination</b>		<b>2.0</b>	<b>60</b>
	<b>Theory Internal</b>			<b>40</b>
<b>Course Objectives:</b>				
<ul style="list-style-type: none"> <li>❖ Present the relationships between abstract algebraic structures with familiar numbers systems such as the integers and real numbers.</li> <li>❖ Present concepts of and the relationships between operations satisfying various properties (e.g. commutative property)</li> <li>❖ Present concepts and properties of various algebraic structures.</li> <li>❖ Discuss the importance of algebraic properties relative to working within various number systems.</li> </ul>				
<b>Unit No.</b>	<b>Content</b>		<b>No. of lectures</b>	
<b>Unit I</b>	<b>Groups and Subgroups</b> Definition of a group, abelian group, order of a group, Finite and infinite groups. Klein 4-group, The symmetric group $S_n$ . The group of symmetries of a plane figure. The Dihedral group $D_n$ as the group of symmetries of a regular polygon of $n$ sides (for $n = 3 ; 4$ ). Subgroups, definition and examples, Necessary and sufficient condition for a non-empty subset to be a subgroup. The Center $Z(G)$ of a group $G$ as a subgroup of $G$ .		<b>15</b>	
<b>Unit II</b>	<b>Cyclic Groups and Cyclic subgroups</b> Definition of a cyclic group, a finite group of order $n$ is a cyclic group iff it contains an element of order $n$ , subgroup of a cyclic group is cyclic. Examples of $Z$ , $Z_n$ , and $\mu(n)$ as Cyclic groups. Properties of cyclic groups, Number of generators of a cyclic group, group of prime order is cyclic, Euler $\phi$ function.		<b>15</b>	
<b>Unit III</b>	<b>Lagrange's Theorem and Group homomorphism</b> Definition of coset and its properties, Lagrange's theorem and consequences such as Fermat's Little theorem, Group homomorphisms Kernel and image of a group homomorphism, Group isomorphisms, Automorphisms of a group. inner automorphism. Examples and properties.		<b>15</b>	

## List of Suggested Practicals based on SMAT502

1. Examples and properties of groups.
2. Group of symmetry of equilateral triangle, rectangle, square.
3. Subgroups.
4. Cyclic groups, cyclic subgroups, finding generators of every subgroup of a cyclic group.
5. Left and right cosets of a subgroup, Lagrange's Theorem.
6. Group homomorphisms, isomorphisms.
7. Miscellaneous Theoretical questions based on full paper.

### **Learning Outcomes:**

After completing the course, the student should be able to :

- Demonstrate when a binary algebraic structure forms a group.
- Construct Cayley tables.
- Determine possible subgroups of a group.
- Identify normal subgroups of a group.
- Examine symmetric and permutation groups.
- Explain group and subgroup orders using Lagrange's theorem.
- Identify cyclic subgroups and their generators.

**T. Y. B. Sc. MATHEMATICS : Choice Based Credit System**

**Semester - V**

**PAPER – III : TOPOLOGY OF METRIC SPACES**

<b>Course Name:</b> TOPOLOGY OF METRIC SPACES (45 lectures)	<b>Course Code:</b> SMAT503	
<b>Periods per week (1 period 48 minutes)</b>	<b>3</b>	
<b>Credits</b>	<b>2.5</b>	
<b>Evaluation System</b>	<b>Hours</b>	<b>Marks</b>
	<b>Theory Examination</b>	<b>60</b>
	<b>Theory Internal</b>	<b>40</b>

**Course Objectives :**

- ❖ To isolate the three fundamental properties of distance and base all our deductions on these three properties alone in the treatment of the metric spaces;
- ❖ To introduce the students to the definitions of basic terms and concepts in metric space topology;
- ❖ To provide students with systematic proofs of theorems using the definitions of basic terms and properties of metrics.
- ❖ To treat the various basic concepts of open and closed sets, adherent points, convergent and Cauchy convergent sequences, complete spaces; compactness and connectedness etc. to the students.

Unit No.	Content	No. of lectures
<b>Unit I</b>	<p><b>Metric spaces (15 Lectures)</b></p> <p>Definition, examples of metric spaces <math>R, R^2</math>, Euclidean space <math>R^n</math> with its Euclidean, sup and sum metric, <math>C</math> (complex numbers), the spaces <math>l^1</math> and <math>l^2</math> of sequences and the space <math>C[a, b]</math>, of real valued continuous functions on <math>[a, b]</math>. Discrete metric space.</p> <p>Distance metric induced by the norm, translation invariance of the metric induced by the norm. Metric subspaces, Product of two metric spaces. Open balls and open sets in a metric space, examples of open sets in various metric spaces. Hausdorff property. Interior of a set. Properties of open sets. Structure of an open set in <math>R</math>. Equivalent metrics.</p> <p>Distance of a point from a set, between sets, diameter of a set in a metric space and bounded sets. Closed ball in a metric space, Closed sets- definition, examples. Limit point of a set isolated point, a closed set contains all its limit points, Closure of a set and boundary of a set.</p>	<b>15</b>
<b>Unit II</b>	<p><b>Sequences and Complete metric spaces</b></p> <p>Sequences in a metric space, Convergent sequence in metric space, Cauchy sequence in a metric space, subsequences, examples of convergent and Cauchy sequence in finite metric spaces, <math>R^n</math> with different metrics and other metric spaces.</p> <p>Characterization of limit points and closure points in terms of sequences. Definition and examples of relative openness/closeness in subspaces. Dense subsets in a metric space and Separability Definition of complete metric spaces,</p>	<b>15</b>

	<p>Examples of complete metric spaces, Completeness property in subspaces, Nested Interval theorem in <math>R</math>, Cantor's Intersection Theorem, Applications of Cantor's Intersection Theorem:</p> <p>(i) The set of real Numbers is uncountable.</p> <p>(ii) Density of rational Numbers (Between any two real numbers there exists a rational number)</p> <p>(iii) Intermediate Value theorem: Let <math>f:[a b] \rightarrow R</math> be continuous function , and assume that <math>f(a)</math> and <math>f(b)</math> are of different signs say, <math>f(a) &lt; 0</math> and <math>f(b) &gt; 0</math>. Then there exists <math>c \in (a, b)</math> such that <math>f(c) = 0</math>.</p>	
<b>Unit III</b>	<p><b>Compact sets</b></p> <p>Definition of compact metric space using open cover, examples of compact sets in different metric spaces <math>R, R^2, R^n</math> Properties of compact sets: A compact set is closed and bounded, (Converse is not true ). Every infinite bounded subset of compact metric space has a limit point. A closed subset of a compact set is compact. Union and Intersection of Compact sets. Equivalent statements for compact sets in <math>R</math>:</p> <p>(i) Sequentially compactness property.</p> <p>(ii) Heine borel property: Let <math>I</math> be a closed and bounded interval. Let <math>\mathcal{F}</math> be a family of Open intervals such that <math>I \subset \bigcup \mathcal{F}</math> Then there exists a finite subset <math>\mathcal{F}_0</math> such that <math>I \subset \bigcup \mathcal{F}_0</math> that is, contained in the union of a finite number of open intervals of the given family.</p> <p>(iii) Closed and boundedness property.</p> <p>(iv) Bolzano-Weierstrass property: Every bounded sequence of real numbers has a convergent subsequence.</p>	<b>15</b>

<b>List of suggested practicals based on SMAT503:</b>	
<ol style="list-style-type: none"> <li>1. Example of metric spaces, normed linear spaces</li> <li>2. Sketching of open balls in <math>\mathbb{R}^2</math> and open sets in metric spaces/ normed linear spaces, interior of a set, subspaces</li> <li>3. Closed sets, sequences in a metric space</li> <li>4. Limit points, dense sets, separability, closure of a set, distance between two sets.</li> <li>5. Complete metric space</li> <li>6. Cantor's Intersection theorem and its applications</li> <li>7. Miscellaneous theory questions from all unit</li> </ol>	

**Learning Outcomes:**

After completing the course, the student should be able to;

- ◆ Define real numbers, identify the convergence and divergence of sequences, explain the limit and continuity of a function at a given point.
- ◆ Construct the geometric model of the set of real numbers.
- ◆ Explain the notion of limit of a function at a given point and if there exists estimate the limit.
- ◆ Define the notion of continuity and obtain the set of points on which a function is continuous.
- ◆ Explain the notion of metric space. Use the open ball on metric spaces, construct the metric topology and define open-closed sets of the space.

<b>Course Objectives :</b>				
<ul style="list-style-type: none"> <li>❖ To develop the mathematical skills of the students in the areas of numerical methods.</li> <li>❖ To teach theory and applications of numerical methods in a large number of engineering subjects which require solutions of linear systems, finding eigen values, eigenvectors, interpolation etc.</li> <li>❖ Apply Numerical methods to obtain approximate solutions to mathematical problems.</li> <li>❖ To lay foundation of computational mathematics for post-graduate courses, specialized studies and research.</li> </ul>				
<b>Unit No.</b>	<b>Content</b>		<b>No. of lectures</b>	
<b>Unit I</b>	<b>Errors Analysis and Transcendental &amp; Polynomial Equations</b> Measures of Errors: Relative, absolute and percentage errors. Types of errors: Inherent error, Round-off error and Truncation error. Taylor's series example. Significant digits and numerical stability. Concept of simple and multiple roots. Iterative methods, error tolerance, use of intermediate value theorem. Iteration methods based on first degree equation: Newton-Raphson method, Secant method, Regula-Falsi method, Iteration Method. Condition of convergence and Rate of convergence of all above methods.		<b>15</b>	
<b>Unit II</b>	<b>Transcendental and Polynomial Equations</b> Iteration methods based on second degree equation: Muller method, Chebyshev method, Multipoint iteration method. Iterative methods for polynomial equations; Descarts rule of signs, Birge-Vieta method, Bairstrow method. Methods for multiple roots. Newton-Raphson method. System of non-linear equations by Newton- Raphson method. Methods for complex roots. Condition of convergence and Rate of convergence of all above methods.		<b>15</b>	
<b>Unit III</b>	<b>Linear System of Equations</b> Matrix representation of linear system of equations. Direct methods: Gauss elimination method. Pivot element, Partial and complete pivoting, Forward and backward substitution method, Triangularization methods-Doolittle and Crout's method, Choleskys method. Error analysis of direct methods. Iteration methods: Jacobi iteration method, Gauss-Siedal method. Convergence analysis of iterative method. Eigen value problem, Jacobis method for symmetric matrices Power method to determine largest eigenvalue and eigenvector.		<b>15</b>	

### List of suggested practicals based on SMAT504A:

1. Newton-Raphson method, Secant method, Regula-Falsi method, Iteration Method
2. Muller method, Chebyshev method, Multipoint iteration method
3. Descarts rule of signs, Birge-Vieta method, Bairstrow method
4. Gauss elimination method, Forward and backward substitution method,
5. Triangularization methods-Doolittles and Crouts method, Choleskys method
6. Jacobi iteration method, Gauss-Siedal method Eigen value problem: Jacobis method for symmetric matrices and Power method to determine largest eigenvalue and eigenvector
7. Miscellaneous theoretical questions from all units

### Learning Outcomes

At the end of this course, the student will able to

- ◆ Understand Newton-Raphson method, Secant method, Regula-Falsi method, and their rate of convergence.
- ◆ Learn Iteration methods: Muller method, Chebyshev method, Multipoint iteration method and their rate of convergence
- ◆ Learn Doolittle and Crouts method, Choleskys method, Jacobi iteration method, Gauss-Siedal method and convergence analysis

### Semester - V

#### PAPER – IV : NUMBER THEORY AND ITS APPLICATIONS – I [Elective B]

<b>Course Name:</b> Number Theory and its applications – I [Elective B] ( <b>45 lectures</b> )		<b>Course Code:</b> SMAT601	
<b>Periods per week (1 period 48 minutes)</b>		<b>3</b>	
<b>Credits</b>		<b>2.5</b>	
<b>Evaluation System</b>	<b>Hours</b>		<b>Marks</b>
	<b>Theory Examination</b>		<b>60</b>
	<b>Theory Internal</b>		<b>40</b>
<p><b>Course Objectives :</b></p> <ul style="list-style-type: none"> <li>❖ To define and interpret the concepts of divisibility, congruence, greatest common divisor, prime, and prime-factorization.</li> <li>❖ To apply the Law of Quadratic Reciprocity and other methods to classify numbers as primitive roots, quadratic residues, and quadratic non-residues.</li> <li>❖ To Formulate and prove conjectures about numeric patterns.</li> <li>❖ To Produce rigorous arguments (proofs) centred on the material of number theory, most notably in the use of Mathematical Induction and/or the Well Ordering Principal in the proof of theorems.</li> </ul>			
Unit No	Content		No. of lectures
<b>Unit I</b>	<p><b>Congruences and Factorization</b> Review of Divisibility, Primes and the fundamental theorem of Arithmetic. Congruences, Complete residue system modulo m, Reduced residue system modulo m, Fermat's little Theorem, Euler's generalization of Fermat's little Theorem, Wilson's theorem, Linear congruences, Simultaneous linear congruences in two variables. The Chinese remainder Theorem, Congruences of Higher degree, The Fermat-Kraitchik Factorization Method.</p>		<b>15</b>
<b>Unit II</b>	<p><b>Diophantine equations and their solutions</b> The linear Diophantine equation <math>ax + by = c</math>. The equation <math>x^2 + y^2 = z^2</math> Primitive Pythagorean triple and its characterisation. The equations <math>x^4 + y^4 = z^2</math> and <math>x^2 + y^2 = z^4</math> have no solutions <math>(x, y, z)</math> with <math>xyz \neq 0</math>. Every positive integer n can be expressed as sum of squares of four integers, Universal quadratic forms <math>x^2 + y^2 + z^2 = t^2</math>.</p>		<b>15</b>
<b>Unit III</b>	<p><b>Primitive Roots and Cryptography</b> Order of an integer and Primitive Roots. Basic notions such as encryption (enciphering) and decryption (deciphering), Cryptosystems, symmetric key cryptography, Simple examples such as shift cipher, Affine cipher, Hill's cipher, Vigenere cipher. Concept of Public Key Cryptosystem; RSA Algorithm. An application of Primitive Roots to Cryptography.</p>		<b>15</b>

## List of suggested practicals based on SMAT504B:

1. Fermat's theorem, Wilson's theorem, Euler's theorem
2. Chinese remainder theorem, linear and higher order congruences, factorization
3. Linear Diophantine equations
4. Pythagorean triples, sum of two squares, three squares, four squares
5. Primitive roots, shift cipher, affine cipher, Hill cipher
6. Vigenere Cipher, Digraph transformations, Public key cryptosystems
7. Miscellaneous theoretical questions from all units

### Learning Outcomes

On studying the syllabi, the learner will be able to

- find quotients and remainders from integer division
  - apply Euclid's algorithm and backwards substitution
  - understand the definitions of congruences, residue classes and least residues
  - add and subtract integers, modulo  $n$ , multiply integers and calculate powers, modulo  $n$
  - determine multiplicative inverses, modulo  $n$  and use to solve linear congruences.
- 

--

## T. Y. B. Sc. MATHEMATICS : Choice Based Credit System

### Semester – V

#### APPLIED COMPONENT : COMPUTER PROGRAMMING AND SYSTEM ANALYSIS

<b>Course Name:</b> COMPUTER PROGRAMMING AND SYSTEM ANALYSIS (60 lectures)	<b>Course Code:</b> SMATAC501		
<b>Periods per week (1 period 48 minutes)</b>	<b>04</b>		
<b>Credits</b>	<b>02</b>		
<b>Evaluation System</b>	<b>Hours</b>		<b>Marks</b>
	<b>Theory Examination</b>		<b>60</b>
	<b>Theory Internal</b>		<b>40</b>

#### Course Objectives :

- ❖ Provide for mass storage of relevant data
- ❖ Allow multiple users to be active at one time.
- ❖ Provide data integrity.
- ❖ Protect the data from physical harm and unauthorized access.
- ❖ Provide security with a user access privilege.
- ❖ To learn why Java is useful for the design of desktop and web applications.
- ❖ To learn how to implement object-oriented designs with Java.

Unit No	Content	No. of lectures
<b>Unit I</b>	<p><b>RELATIONAL DATA BASE MANAGEMENT SYSTEM</b></p> <p><b>Introduction to Data base Concepts:</b>                      Database, Overview of data base management system.                      Data base Languages- Data Definition Languages (DDL) and Data Manipulation Languages (DML).</p> <p>2. Entity Relation Model: Entity, attributes, keys, relations, Designing ER diagram, integrity Constraints over relations, conversion of ER to relations with and without constraints.</p> <p>3. SQL Commands and functions</p> <p>a) Creating and altering tables: CREATE statement with constraints like KEY, CHECK, DEFAULT, ALTER and DROP statement.</p> <p>b) Handling data using SQL: selecting data using SELECT statement, FROM clause, WHERE clause, HAVING clause, ORDERBY, GROUP BY, DISTINCT and ALL predicates, Adding data with INSERT statement, changing data with UPDATE statement, removing data with DELETE statement.</p> <p>c) Functions: Aggregate functions- AVG, SUM, MIN, MAX and COUNT, Date functions-                      ADD_MONTHS(), CURRENT_DATE(), LAST_DAY(), MONTHS_BETWEEN (), NEXT_DAY() .                      String functions- LOWER(), UPPER(), LTRIN(), RTRIM(), TRIN(), INSERT(), RIGHT(), LEFT(), LENGTH(), SUBSTR().                      Numeric functions: ABS(), EXP(), LOG(), SQRT(), POWER(), SIGN(), ROUND().</p> <p>d) Joining tables: Inner, outer and cross joins, union.</p>	<b>15</b>

<b>Unit II</b>	<p><b>CORE JAVA</b></p> <p><b>Java Programming Features:</b> object-orientations: Abstraction, Inheritance, Encapsulation and Polymorphism.</p> <p><b>Introduction:</b> History of Java features, different types of Java programs, Differentiate Java with C. Java Virtual Machine.</p> <p><b>Java Basics:</b> Variables and data types, declaring variables, literals numeric, Boolean, character and string literals, keywords, type conversion and casting. Standard default values. Java Operators, Loops and Controls.</p> <p><b>Arrays:</b> one and two – dimensional array, declaring array variables, creating array objects, accessing array elements.</p> <p><b>Access control:</b> public access, friendly access, protected access, private access.</p>	<p><b>15</b></p>
<b>Unit III</b>	<p><b>OBJECT ORIENTED PROGRAMMING WITH JAVA</b></p> <p><b>Classes:</b> Defining a class, creating instance and class members: creating object of a class, accessing instance variables of a class, creating method, naming method of a class, accessing method of a class, overloading method, ‘this’ keyword, constructor and Finalizer: Basic Constructor, parameterized constructor, calling another constructor, finalize () method, overloading constructor.</p> <p><b>Inheritance:</b> Various types of inheritance, super and sub classes, keywords- ‘extends’, ‘super’, over riding method, final and abstract class: final variables and methods, final classes, abstract methods and classes. Concepts of interface.</p> <p><b>Exception Handling and Packages:</b> Need for Exceptional Handling, Exception Handling techniques: try and catch, multiple catch statements, finally block, us age of throw and throws. Concept of packages. Inter class method: parseInt().</p>	<p><b>15</b></p>
<b>Unit IV</b>	<p><b>DATA STRUCTURE APPLICATIONS WITH JAVA</b></p> <p>Multithreading, Enumeration, Auto Boxing, search and sorting, introduction to Stack, Queue and linked list and Trees.</p>	<p><b>15</b></p>

**Learning Outcomes:**

Upon successful completion of this course, students should be able to:

- ◆ Describe the fundamental elements of relational database management systems
- ◆ Explain the basic concepts of relational data model, entity-relationship model, relational database design, relational algebra and SQL.
- ◆ Design ER-models to represent simple database application scenarios
- ◆ Convert the ER-model to relational tables, populate relational database and formulate SQL queries on data.
- ◆ Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs.
- ◆ Read and make elementary modifications to Java programs that solve real-world problems.
- ◆ Validate input in a Java program.
- ◆ Identify and fix defects and common security issues in code.

**T. Y. B. Sc. MATHEMATICS : Choice Based Credit System**

**Semester - VI**

**PAPER – I : BASIC COMPLEX ANALYSIS**

<b>Course Name:</b> Basic Complex Analysis (45 lectures)	<b>Course Code:</b> SMAT601		
<b>Periods per week (1 period 48 minutes)</b>	<b>03</b>		
<b>Credits</b>	<b>2.5</b>		
<b>Evaluation System</b>	<b>Hours</b>	<b>Marks</b>	
	<b>Theory Examination</b>	<b>2.0</b>	<b>60</b>
	<b>Theory Internal</b>		<b>40</b>

**Course Objectives :**

- ❖ Understand how complex numbers provide a satisfying extension of the real numbers
- ❖ Learn techniques of complex analysis that make practical problems easy (e.g. graphical rotation and scaling as an example of complex multiplication);
- ❖ Appreciate how mathematics is used in design (e.g. conformal mapping)
- ❖ Learn how to find the radius of convergence, disc of convergence.

Unit No.	Content	No. of lectures
<b>Unit I</b>	<p><b>Introduction to Complex Analysis</b></p> <p>Review of complex numbers: Complex plane, polar coordinates, exponential map, powers and roots of complex numbers, De Moivre's formula, <math>C</math> as a metric space, bounded and unbounded sets, point at infinity-extended complex plane, sketching of set in complex plane (No questions to be asked). Limit at a point, theorems on limits, convergence of sequences of complex numbers and results using properties of real sequences. Functions <math>f: C \rightarrow C</math> real and imaginary part of functions, continuity at a point and algebra of continuous functions. Derivative of <math>f: C \rightarrow C</math> comparison between differentiability in real and complex sense, Cauchy-Riemann equations, sufficient conditions for differentiability, analytic function, <math>f, g</math> analytic then <math>f + g, f - g, fg</math> and <math>f/g</math> are analytic, chain rule.</p> <p>Cauchy Theorem, Harmonic functions and harmonic conjugate.</p>	15
<b>Unit II</b>	<p><b>Cauchy Integral Formula</b></p> <p>Explain how to evaluate the line integral <math>\int_{ z-z_0 =r} f(z)dz</math> and prove the Cauchy integral formula. Taylor's theorem for analytic function, Mobius transformations: definition and examples, Exponential function, its properties, trigonometric function, hyperbolic functions.</p>	15

<b>Unit III</b>	<p><b>Complex power series, Laurent series and isolated singularities</b>  Power series of complex numbers and related results following from Unit I, radius of convergences, disc of convergence, uniqueness of series representation, examples.  Definition of Laurent series , Definition of isolated singularity, statement (without proof) of existence of Laurent series expansion in neighbourhood of an isolated singularity, type of isolated singularities viz. removable, pole and essential defined using Laurent series expansion, examples, Statement of Residue theorem and calculation of residue.</p>	15
-----------------	--	----

**List of suggested practicals based on SMAT601:**

1. Limit and continuity and sequence of complex numbers
2. Derivatives of complex functions , analyticity, harmonic functions
3. Elementary functions and Mobius transformation
4. Complex integration, Cauchy integral formula and Cauchy integral theorem
5. Taylor’s series, Laurent series and singularities
6. calculation of residues and applications
7. Miscellaneous theoretical questions based on three units

**Learning Outcomes**

On studying the syllabi, the learner will be able to:

- ♦ Define the concepts of derivation of analytic functions.
- ♦ Calculate the analytic functions.
- ♦ Express the Cauchy’s Derivative formulas.
- ♦ Define the concept of Cauchy-Goursat Integral Theorem
- ♦ Evaluate complex integrals by using Cauchy-Goursat Integral Theorem
- ♦ Define the simple and multiple connected domains.
- ♦ Define the concept of sequences and series of the complex functions.
- ♦ Express concepts of convergence sequences and series of the complex functions.
- ♦ Express concepts of absolute and uniform convergence of power series.
- ♦ Define the concepts of Taylor and Laurent series.
- ♦ Find Taylor series of a function.

=====

**❖ T. Y. B. Sc. MATHEMATICS : Choice Based Credit System**

**Semester - VI**

**PAPER – II: ALGEBRA-VI**

<b>Course Name:</b> ALGEBRA-VI (45 lectures)	<b>Course Code:</b> SMAT602		
<b>Periods per week (1 period 48 minutes)</b>	<b>03</b>		
<b>Credits</b>	<b>2.5</b>		
<b>Evaluation System</b>	<b>Hours</b>	<b>Marks</b>	
	<b>Theory Examination</b>	<b>2.0</b>	<b>60</b>
	<b>Theory Internal</b>		<b>40</b>

**Course Objectives :**

- ❖ Present the relationships between abstract algebraic structures with familiar numbers systems such as the integers and real numbers.
- ❖ Present concepts of and the relationships between operations satisfying various properties.
- ❖ Present concepts and properties of various algebraic structures.
- ❖ Discuss the importance of algebraic properties relative to working within various number systems.

Unit No.	Content	No. of lectures
<b>Unit I</b>	<p><b>Group Theory</b>                      Normal subgroups: Normal subgroups of a group, definition and examples including center of a group, Quotient group, Alternating group <math>A_n</math> Cycles. Listing normal subgroups of <math>A_4, S_3</math>. First Isomorphism theorem (or Fundamental Theorem of homomorphisms of groups), Second Isomorphism theorem, third Isomorphism theorem, Cayley's theorem, External direct product of a group, Properties of external direct products, Order of an element in a direct product, criterion for direct product to be cyclic, Classification of groups of order <math>\leq 7</math>.</p>	15
<b>Unit II</b>	<p><b>Ring Theory</b>                      Motivation: Integers &amp; Polynomials.                      Definitions of a ring (The definition should include the existence of a unity element), zero divisor, unit, the multiplicative group of units of a ring. Basic Properties &amp; examples of rings, including <math>Z, Q, R, C, M_n(R), Q[X], R[X], C[X], Z[i], Z[\sqrt{2}], Z[\sqrt{-5}], Z_n</math>.                      Definitions of Commutative ring, integral domain (ID), Division ring, examples. Theorem such as: A commutative ring <math>R</math> is an integral domain if and only if for <math>a, b, c \in R</math> with <math>a \neq 0</math> the relation <math>ab = ac</math> implies that <math>b = c</math>. Definitions of Subring, examples. Ring homomorphisms, Properties of ring homomorphisms, Kernel of a ring homomorphism, Ideals, Operations on ideals and Quotient rings, examples. Factor theorem, First and second Isomorphism theorems for rings, Correspondence Theorem for rings (If <math>f: R \rightarrow R'</math> is a surjective ring homomorphism, then there is a 1 – 1 correspondence between the ideals of <math>R</math> containing the <math>ker f</math> and the ideals of <math>R</math>. Definitions of characteristic of a ring, Characteristic of an ID.</p>	15

<b>Unit III</b>	<b>Polynomial Rings and Field theory</b> Principal ideal, maximal ideal, prime ideal, characterization of the prime and maximal ideals in terms of quotient rings. Polynomial rings, $R[X]$ when $R$ is an integral domain/field. Divisibility in an Integral Domain, Definitions of associates, irreducible and primes. Prime (irreducible) elements in $R[X]$ , $Q[X]$ , $Z_p[X]$ . Eisenstein's criterion for irreducibility of a polynomial over $Z$ . Prime and maximal ideals in polynomial rings. Definition of field, subfield and examples, characteristic of fields. Any field is an ID and a finite ID is a field. Characterization of fields in terms of maximal ideals, irreducible polynomials. Construction of quotient field of an integral domain (Emphasis on $Z$ , $Q$ ). A field contains a subfield isomorphic to $Z_p$ or $Q$ .	15
-----------------	--	----

<b>List of suggested Practicals based on SMAT602:</b>
<ol style="list-style-type: none"> <li>1. Normal Subgroups and quotient groups</li> <li>2. Cayley's Theorem and external direct product of groups</li> <li>3. Rings, Subrings, Ideals, Ring Homomorphism and Isomorphism</li> <li>4. Prime Ideals and Maximal Ideals</li> <li>5. Polynomial Rings</li> <li>6. Fields</li> <li>7. Miscellaneous Theoretical questions on Unit 1, 2 and 3</li> </ol>

**Learning Outcomes :**

At the end of this course, the student will be able to

- Examine symmetric and permutation groups.
- Explain Normal subgroup.
- Identify factor group.
- Write precise and accurate mathematical objects in ring theory
- For checking the irreducibility of higher degree polynomials over rings.
- Understand the concepts like ideals and quotient rings.
- Understand the concept of ring homomorphism.
- Apply Eisenstein's criterion for irreducibility of a polynomial
- Construct quotient field.

<b>T. Y. B. Sc. MATHEMATICS : Choice Based Credit System</b>			
<b>Semester - VI</b>			
<b>PAPER – III : TOPOLOGY OF METRIC SPACES AND REAL ANALYSIS</b>			
<b>Course Name:</b> Topology of Metric Spaces and Real Analysis (45 lectures)		<b>Course Code:</b> SMAT603	
<b>Periods per week (1 period 50 minutes)</b>		<b>03</b>	
<b>Credits</b>		<b>2.5</b>	
<b>Evaluation System</b>		<b>Hours</b>	<b>Marks</b>
	<b>Theory Examination</b>	<b>2.0</b>	<b>60</b>
	<b>Theory Internal</b>		<b>40</b>
<b>Course Objectives :</b>			
<ul style="list-style-type: none"> <li>❖ To introduce the notion of metric spaces and extend several theorems and concepts about the real numbers and real valued functions, such as convergence and continuity, to the more general setting of these spaces.</li> <li>❖ To provide students with systematic proofs of theorems using the definitions of basic terms and properties of metrics.</li> <li>❖ To introduce the notion of Sequence and Series of functions.</li> </ul>			
<b>Unit No.</b>	<b>Content</b>		<b>No. of lectures</b>
<b>Unit I</b>	<b>Continuous functions on metric spaces</b> Epsilon-delta definition of continuity at a point of a function from one metric space to another. Characterization of continuity at a point in terms of sequences, open sets and closed sets and examples, Algebra of continuous real valued functions on a metric space. Continuity of composite continuous function. Continuous image of compact set is compact, uniform continuity in a metric space, definition and examples (emphasis on $\mathbb{R}$ ). Let $(X, d)$ and $(Y, d)$ be metric spaces and $f: X \rightarrow Y$ be continuous, where $(X, d)$ is a compact metric space, then $f: X \rightarrow Y$ is uniformly continuous. Contraction mapping and fixed point theorem, Applications.		<b>15</b>
<b>Unit II</b>	<b>Connected sets</b> Separated sets- Definition and examples, disconnected sets, disconnected and connected metric spaces, connected subsets of a metric space, Connected subsets of $\mathbb{R}$ . A subset of $\mathbb{R}$ is connected if and only if it is an interval. A continuous image of a connected set is connected. Characterization of a connected space, viz. a metric space is connected if and only if every continuous function from $X$ to $\{1, -1\}$ is a constant function. Path connectedness in $R^n$ , definition and examples. A path connected subset of $R^n$		<b>15</b>

	is connected, convex sets are path connected. Connected components. An example of a connected subset of $R^n$ which is not path connected.	
<b>Unit III</b>	<p><b>Sequence and series of functions</b></p> <p>Sequence of functions - pointwise and uniform convergence of sequences of real-valued functions, examples. Uniform convergence implies pointwise convergence, example to show converse not true, series of functions, convergence of series of functions, Weierstrass M-test. Examples. Properties of uniform convergence: Continuity of the uniform limit of a sequence of continuous function, conditions under which integral and the derivative of sequence of functions converge to the integral and derivative of uniform limit on a closed and bounded interval. Examples. Consequences of these properties for series of functions, term by term differentiation and integration. Power series in <math>R</math> centered at origin and at some point in <math>R</math>, radius of convergence, region (interval) of convergence, uniform convergence, term by-term differentiation and integration of power series, Examples. Uniqueness of series representation, functions represented by power series, classical functions defined by power series such as exponential, cosine and sine functions, the basic properties of these functions.</p>	<b>15</b>

<b>List of suggested practicals based on SMAT603</b>
<ol style="list-style-type: none"> <li>1. Compact sets in various metric spaces</li> <li>2. Compact sets in <math>\mathbb{R}^n</math></li> <li>3. Continuity in a metric space</li> <li>4. Uniform continuity, contraction maps, fixed point theorem</li> <li>5. Connectedness in metric spaces</li> <li>6. Path connectedness</li> <li>7. Miscellaneous theory questions on all units</li> </ol>

**Learning Outcomes :**

At the end of this course, the student will be able to

- define the notion of continuity and obtain the set of points on which a function is continuous.
- express the notion of metric space, construct the topology by using the metric and using this topology identify the continuity of the functions which are defined between metric spaces.
- identify the continuity of a function which is defined on metric spaces, at a given point and identify the set of points on which a function is continuous.
- Theory of sequence and series of functions.

Numerical differentiation: Finite differences (forward, backward and central), Numerical Partial differentiation</li> <li>5. Numerical differentiation and Integration based on Interpolation</li> <li>6. Numerical Integration: Trapezoidal rule, Simpsons 1/3rd rule, Simpsons 3/8th rule Composite integration methods: Trapezoidal rule, Simpsons rule Euler's Method, Modified Euler's Method, Runge- Kutta Methods of second order.</li> <li>7. Miscellaneous theory questions on all units.</li> </ol>

**Learning Outcomes:**

At the end of this course, the student will be able to

- ◆ Demonstrate understanding of common numerical methods and how they are used to obtain approximate solutions to otherwise intractable mathematical problems.
- ◆ Apply numerical methods to obtain approximate solutions to mathematical problems.
- ◆ Derive numerical methods for various mathematical operations and tasks, such as interpolation, differentiation, integration, the solution of linear and nonlinear equations, and the solution of differential equations.
- ◆ Analyse and evaluate the accuracy of common numerical methods.

<b>T. Y. B. Sc. MATHEMATICS : Choice Based Credit System</b>				
<b>Semester - VI</b>				
<b>PAPER – IV : NUMBER THEORY AND ITS APPLICATIONS – II [Elective B]</b>				
<b>Course Name:</b> Number Theory and its applications – II [Elective B] ( <b>45 lectures</b> )		<b>Course Code:</b> SMAT604B		
<b>Periods per week (1 period 48 minutes)</b>		<b>03</b>		
<b>Credits</b>		<b>2.5</b>		
<b>Evaluation System</b>			<b>Hours</b>	<b>Marks</b>
	<b>Theory Examination</b>		<b>2.0</b>	<b>60</b>
	<b>Theory Internal</b>			<b>40</b>
<b>Course Objectives:</b>				
<ul style="list-style-type: none"> <li>❖ Identify and apply various properties of and relating to the integers including the Well-Ordering Principle, primes, unique factorization, the division algorithm, and greatest common divisors.</li> <li>❖ Identify certain number theoretic functions and their properties.</li> <li>❖ Understand the concept of a congruence and use various results related to congruences including the Chinese Remainder Theorem.</li> <li>❖ Solve certain types of Diophantine equations.</li> <li>❖ Identify how number theory is related to and used in cryptography.</li> </ul>				
<b>Unit No.</b>	<b>Content</b>		<b>No. of lectures</b>	
<b>Unit I</b>	<b>Quadratic Reciprocity</b> Quadratic residues and Legendre Symbol, Gauss' Lemma, Theorem on Legendre Symbols and Quadratic Reciprocity law and its applications, The Jacobi Symbol and law of reciprocity for Jacobi Symbol. Quadratic Congruences with Composite moduli.		<b>15</b>	
<b>Unit II</b>	<b>Continued Fractions</b> Finite continued fractions. Infinite continued fractions and representation of an irrational number by an infinite simple continued fraction, Rational approximations to irrational numbers and order of convergence, Best possible approximations. Periodic continued fractions. Pell's equations and their solutions.		<b>15</b>	
<b>Unit III</b>	<b>Pells equation Arithmetic function and Special numbers</b> Pell's equation $x^2 - dy^2 = n$ , where $d$ is not a square of an integer. Solutions of Pell's equation. (The proofs of convergence theorems to be omitted). Arithmetic functions of number theory: $d(n), \sigma(n), \sigma_k(n), \omega(n)$ and their properties, $\mu(n)$ and the Mobius inversion formula. Special numbers: Fermat numbers, Mersenne numbers, Perfect numbers, Amicable numbers, Pseudoprimes, Carmichael numbers.		<b>15</b>	

### List of suggested practicals based on SMAT604B

1. Legendre Symbol, Gauss' Lemma, quadratic reciprocity law
2. Jacobi Symbol, quadratic congruences with prime and composite moduli
3. Finite and infinite continued fractions
4. Approximations and Pell's equations
5. Arithmetic functions of number theory
6. Special numbers
7. Miscellaneous

### Learning Outcomes:

At the end of this course, the student will be able to

- To understand use concepts and uses of finite continued fractions
- To learn relation between irrational numbers and infinite continued fractions
- Solving quadratic congruence using Legendre and Jacobi symbols
- To understand number theoretic functions such as sigma, tau, Euler's

## T. Y. B. Sc. MATHEMATICS : Choice Based Credit System

### Semester – VI

#### APPLIED COMPONENT : COMPUTER PROGRAMMING AND SYSTEM ANALYSIS

<b>Course Name:</b> COMPUTER PROGRAMMING AND SYSTEM ANALYSIS (60 lectures)		<b>Course Code:</b> SMATAC601	
<b>Periods per week (1 period 48 minutes)</b>		<b>04</b>	
<b>Credits</b>		<b>02</b>	
<b>Evaluation System</b>		<b>Hours</b>	<b>Marks</b>
	<b>Theory Examination</b>	<b>2.0</b>	<b>60</b>
	<b>Theory Internal</b>		<b>40</b>
<b>Course Objectives :</b>			
<ul style="list-style-type: none"> <li>❖ Master the fundamentals of writing Python scripts</li> <li>❖ Learn core Python scripting elements such as variables and flow control structures</li> <li>❖ Discover how to work with lists and sequence data</li> <li>❖ Write Python functions to facilitate code reuse</li> <li>❖ Use Python to read and write files</li> <li>❖ Make their code robust by handling errors and exceptions properly</li> <li>❖ Work with the Python standard library</li> <li>❖ Explore Python's object-oriented features</li> </ul>			
<b>Unit No</b>	<b>Content</b>		<b>No. of lectures</b>
<b>Unit I</b>	<b>Introduction to Python</b> i. A brief introduction about Python and installation of anaconda. ii. Numerical computations in Python including square root, trigonometric functions using math and cmath module. Different data types in Python such as list, tuple and dictionary. iii. If statements, for loop and While loops and simple programmes using these. iv. User-defined functions and modules. Various use of lists, tuple and dictionary. v. Use of Matplotlib to plot graphs in various formats.		<b>15</b>
<b>Unit II</b>	<b>Advanced topics in Python</b> i. Classes in Python. ii. Use of Numpy and Scipy for solving problems in linear algebra and calculus, differential equations. iii. Data handling using Pandas.		<b>15</b>
<b>Unit III</b>	<b>Introduction to Sage Math</b> i. Sage installation and use in various platforms. Using Sage Math as an advanced calculator. ii. Defining functions and exploring the concept of calculus. iii. Finding roots of functions and polynomials. iv. Plotting graph of 2D and 3D in Sage Math. v. Defining vectors and matrices and exploring concepts in linear algebra.		<b>15</b>

<b>Unit IV</b>	<b>Programming in Sage Math</b> i. Basic single and multivariable calculus with Sage. ii. Developing Python programmes in Sage to solve some problems in numerical analysis and linear algebra. iii. Exploring concepts in number theory.	<b>15</b>
----------------	--	-----------

**Learning Outcomes:**

- Write, Test and Debug Python Programs
- Implement Conditionals and Loops for Python Programs
- Use functions and represent Compound data using Lists, Tuples and Dictionaries

**THEORY EXAMINATION PATTERN**

Que.1 A)	Attempt Any One:	(8 Marks)
	i) Theory Question based on Unit-I	
	ii) Theory Question based on Unit-I	
B)	Attempt Any Two:	(12 Marks)
	i) Problems based on Unit-I	
	ii) Problems based on Unit-I	
	iii) Problems based on Unit-I	
Que.2 A)	Attempt Any One:	(8 Marks)
	i) Theory Question based on Unit-II	
	ii) Theory Question based on Unit-II	
B)	Attempt Any Two:	(12 Marks)
	i) Problems based on Unit-II	
	ii) Problems based on Unit-II	
	iii) Problems based on Unit-II	
Que.3 A)	Attempt Any One:	(8 Marks)
	i) Theory Question based on Unit-III	
	ii) Theory Question based on Unit-III	
B)	Attempt Any Two:	(12 Marks)
	i) Problems based on Unit-III	
	ii) Problems based on Unit-III	
	iii) Problems based on Unit-III	

**Semester End Examinations Practicals:**

There shall be a Semester-end practical examinations of three hours duration and 100 marks for each of the courses SMATP501 of Semester V and USMTP601 of semester VI.

**Marks for Journals and Viva:**

For each course SMAT501, SMAT502, SMAT503, USMT504A/B, SMAT601, SMAT602, SMAT603, and SMAT604A/B

**1. Journals: 5 marks.**

**2. Viva: 5 marks.**

Each Practical of every course of Semester V and VI shall contain 10 (ten) problems out of which minimum 05 (five) have to be written in the journal. A student must have a certified journal before appearing for the practical examination.

**PRATICAL EXAMINATION PATTERN**

Que.1	Attempt any 8 objectives out of 12 from the following:	(8 x 3=24 Marks)
Que.2	Attempt any two from the following:	(8 x 2 =16 Marks)
	a) Based on unit-I	
	b) Based on unit-II	
	c) Based on unit-III	

**APPLIED COMPONENT THEORY EXAMINATION PATTERN**

<b>Que.1</b>	<b>Attempt Any Three:</b>	<b>(15 Marks)</b>
	i) Question based on Unit-I	
	ii) Question based on Unit-I	
	iii) Question based on Unit-I	
	iv) Question based on Unit-I	
	v) Question based on Unit-I	
<b>Que.2</b>	<b>Attempt Any Three:</b>	<b>(15 Marks)</b>
	i) Question based on Unit-II	
	ii) Question based on Unit-II	
	iii) Question based on Unit-II	
	iv) Question based on Unit-II	
	v) Question based on Unit-II	
<b>Que.3</b>	<b>Attempt Any Three:</b>	<b>(15 Marks)</b>
	i) Question based on Unit-III	
	ii) Question based on Unit-III	
	iii) Question based on Unit-III	
	iv) Question based on Unit-III	
	v) Question based on Unit-III	
<b>Que.4</b>	<b>Attempt Any Three:</b>	<b>(15 Marks)</b>
	i) Question based on Unit-IV	
	ii) Question based on Unit-IV	
	iii) Question based on Unit-IV	
	iv) Question based on Unit-IV	
	v) Question based on Unit-IV	

**Semester End Examinations Practicals:**

There shall be a Semester-end practical examinations of three hours duration and 100 marks for each of the courses SMATACP501 of Semester V and USMATACP601 of semester VI.

**Marks for Journals and Viva:**

**1. Journals: 10 marks.                      2. Viva: 10 marks.**

A student must have a certified journal before appearing for the practical examination.

**APPLIED COMPONENT PRACTICAL EXAMINATION**

Que.1	Question based on Unit-I	(20 Marks)
Que.2	Question based on Unit-II	(20 Marks)
Que.3	Question based on Unit-III	(20 Marks)
Que.4	Question based on Unit-IV	(20 Marks)
